RICOH
imagine. change.

Budgets are tight. Standards are high. Students' needs are complex. Testing is an important tool for understanding and continually improving performance. Are you relying on yesterday's testing system to meet today's challenges? Discover testing and grading solutions that really make the grade.

For years, many schools have been using the same system to produce and score tests. This solution requires proprietary equipment and forms that result in unnecessary costs. It limits educators' flexibility in tailoring test structure and content to students' needs. And it lacks analytics capabilities—so it's time consuming and difficult for teachers to identify trends and patterns across students and classes. It's also more difficult to understand which test questions may be poorly worded.

Ricoh Testing Solutions for Education offer a more robust, flexible and cost-efficient approach to creating, scoring and analyzing student exams.

Our solutions combine powerful software with Ricoh multi-function devices—enabling you to increase speed and agility while driving down costs. Ricoh makes it easier for teachers to customize exams, to quickly and effectively assess test results and to track and analyze student performance over time. In some cases, we can even automate integration of test results into your student information system.

Ricoh Testing and Grading Solution for Education

Multiple Choices for Designing Tests, Analyzing Performance

Ricoh Testing and Grading Solutions for Education offers a modern approach to creating and scoring student exams. Integrated with Ricoh multi-function devices (MFDs), the software offers greater flexibility and cost efficiency compared to traditional bubble-sheet testing systems. They also provide analytics capabilities so your faculty can more quickly and easily identify trends in student performance—as well as opportunities to improve their exams.

Spend less on tests

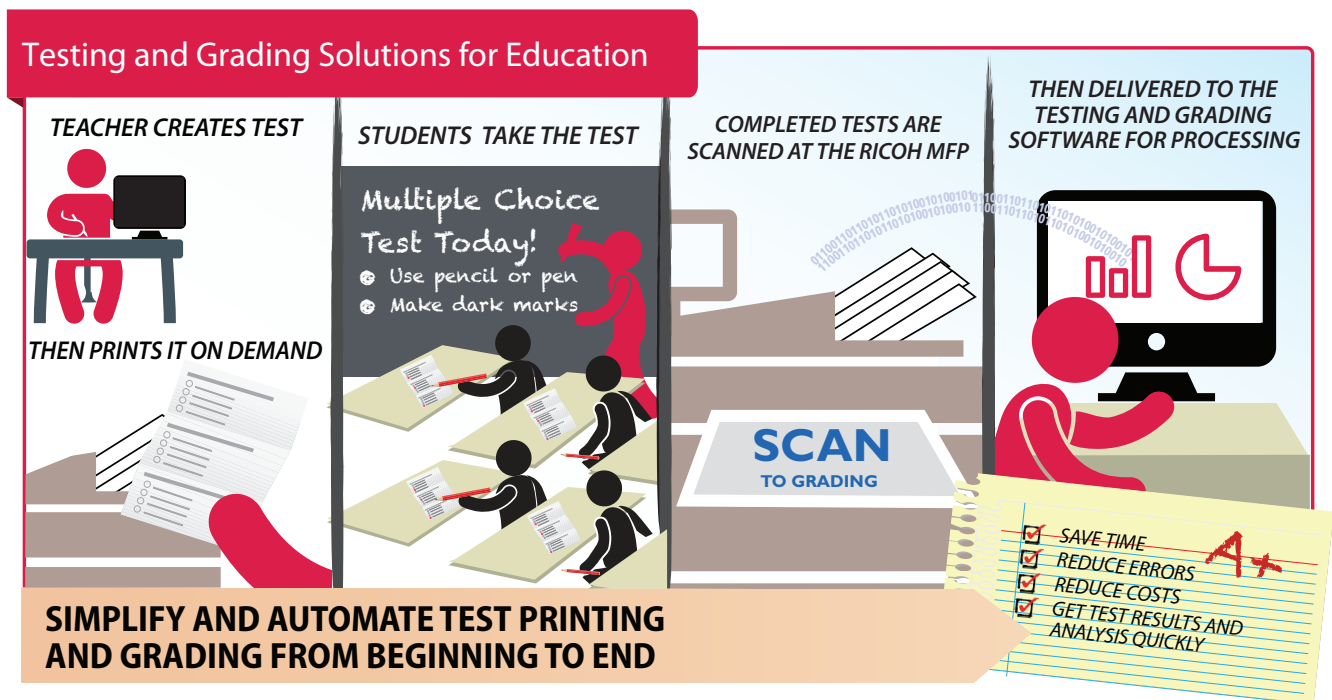

If you're using a proprietary system, you're probably wasting money on special forms and missing opportunities to make better use of your Ricoh equipment. With our testing and grading solutions, you can print tests on plain paper. And instead of relying on a proprietary scanner, you can score tests using your Ricoh multi-function device. So you're spending less on consumables and maintenance—and getting more value from your existing technology investments.

Give faculty more flexibility—and time for teaching

Despite a wide variety of proprietary forms, most of your faculty will welcome the chance to tailor exams to their teaching style and their students. Ricoh's solutions offer teachers a broader array of options when creating and scoring tests—including addressing government-mandated education standards. We also help reduce teachers' administrative burden, freeing up more time for teaching and engaging with their students.

Make the most of your information and time

Old-school testing and scoring systems simply tell you which answers are "right" and which are "wrong." With the right software, testing data can provide a wealth of information about student performance. Our solutions can help faculty enhance test design by, for instance, identifying questions that may be poorly worded. The analytics capabilities—along with the ability to integrate with your student information system—can potentially help shape curriculum design. It also helps capture objective, quantitative data about student performance and then track and analyze it over time.
